## Model Nomenclature

Rev.: 18 January 2016

**Notes:**

- 1 Available on 040, 050, 060 and 075 only. Hot Water Generator requires field installed external pump kit.
- 2 018 and 025 heating only models are available only with copper double wall vented load coax for potable water, and are not designed to be converted to dedicated cooling units.
- 3 Flow meter for Performance option is shipped with unit, and must be externally field installed.

All Affinity Hydronic Series product is safety listed under UL1995 thru ETL and performance listed with AHRI in accordance with standard 13256-1. The Envision Series is also ENERGY STAR® rated.

The manufacturer works continually to improve its products. As a result, the design and specifications of each product at the time of order may be changed without notice. Purchaser's approval of this data set signifies that the equipment is acceptable under the provisions of the job specification. Statements and other information contained herein are not express warranties and do not form the basis of any bargain between the parties, but are merely the manufacturer's opinion or commendation of its products. York and Affinity are registered trademarks of Johnson Controls, Inc., and are used with permission.

## Definitions

COP = Coefficient of Performance	KW = Power in KiloWatts
EER = Energy Efficiency Ratio	LLT = Leaving Load Temperature
ELT = Entering Load Temperature	LRA = Locked Rotor Amps
FLA = Full Load Amps	LST = Leaving Source Temperature
FT HD = Feet of Head	MCC = Maximum Continuous Current
GPM = Gallons per Minute	PD = Pressure Drop
HC = Heating Capacity	PSI = Pounds per Square Inch
HE = Heat of Extraction	RLA = Rated Load Amps
HR = Heat of Rejection	TC = Total Cooling Capacity

## Performance Standard (AHRI/ISO/ASHRAE 13256-2)

The Single Stage Hydronic Series is rated in accordance to the upcoming performance standard AHRI/ASHRAE/ISO 13256-2. This new standard will have three major categories: Water Loop, Ground Water, and Ground Loop.

### Unit of Measure: The Cooling COP

The cooling efficiency is measured in EER (US version measured in Btuh per Watt. The Metric version is measured in a cooling COP (Watt per Watt) similar to the traditional COP measurement.

### Pump Power Correction Calculation

Within each model, only one water flow rate is specified for all three groups and pumping Watts are calculated using the following formula. This additional power is added onto the existing power consumption.

- Pump power correction = (gpm x 0.0631) x (Press Drop x 2990) / 300

Where 'gpm' is waterflow in gpm and 'Press Drop' is the pressure drop through the unit heat exchanger at rated water flow in feet of head.

### ISO Capacity and Efficiency Calculations

The following equations illustrate cooling calculations:

- ISO Cooling Capacity = Cooling Capacity (Btuh) x 3.412
- ISO EER Efficiency (W/W) = ISO Cooling Capacity (Btuh) x 3.412 / [Power Input (Watts) + Pump Power Correction (Watt)]

The following equations illustrate heating calculations:

- ISO Heating Capacity = Heating Capacity (Btuh) x 3.412
- ISO COP Efficiency (W/W) = ISO Heating Capacity (Btuh) x 3.412 / [Power Input (Watts) + Pump Power Correction (Watt)]

### Test Conditions

	ISO/AHRI 13256-2 WLHP	ISO/AHRI 13256-2 GWHP	ISO/AHRI 13256-2 GLHP
<b>Cooling</b>			
Liquid Entering Indoor Side - °F <i>Standard Rating Test</i>	53.6	53.6	53.6
Liquid Entering Heat Exchanger - °F <i>Part-load Rating Test</i>	86	59	77
Liquid Entering Heat Exchanger Fluid Flow Rate	86 *	59 *	68 *
<b>Heating</b>			
Liquid Entering Indoor Side - °F <i>Standard Rating Test</i>	104	104	104
Liquid Entering Outdoor-side Heat Exchanger - °F <i>Part-load Rating Test</i>	68	50	32
Liquid Entering Outdoor-side Heat Exchanger Fluid Flow Rate	68 *	50 *	41 *

### Conversions

Water Flow (lps) = GPM x 0.0631

Press Drop (Pascals) = Press Drop (ft hd) x 2990

**NOTES:** \*Flow rate is specified by the manufacturer  
 WLHP = Water Loop Heat Pump; GWHP = Ground Water Heat Pump;  
 GLHP = Ground Loop Heat Pump

## Aurora Control - 208-230/60/1

- Notes**

  - 1 - Switch blue and red wires for 208V operation.
  - 2 - HydroZone controller is an optional field installed accessory.
  - 3 - Reversing Valve wires not installed on heating only option
  - 4 - FP2 is replaced with a resistor on heating only option
  - 5 - Move black/white(3) wire when HydroZone is not used for pump control
  - 6 - When Geothermal Storage Tank is wired directly to the Aurora Board
  - 7 - HydroZone Controller may be labeled - or L.
  - 8 - HydroStat Communicating Controller is an optional field installed accessory.

ABC SW2 Accessory Relay			
DESCRIPTION	SW2-4	SW2-5	
Cycle with Blower	ON	ON	
Cycle with Compressor	OFF	OFF	
Water Valve Slow Opening	ON	OFF

## Engineering Guide Specifications

### General

The liquid source water-to-water heat pump shall be a single packaged heating only or reverse-cycle heating/cooling unit. Dedicated non-reversing heating only units shall be easily field convertible to cooling only units. The unit shall be listed by a nationally recognized safety-testing laboratory or agency, such as ETL Testing Laboratory, Underwriters Laboratory (UL), or Canadian Standards Association (CSA). The unit shall be rated in accordance with Air Conditioning, Heating, and Refrigeration Institute/International Standards Organization (AHRI/ISO) and Canadian Standards Association (CSA-US). The liquid source water-to-water heat pump unit shall be designed to operate with source liquid temperatures between 30°F [-1.1°C] and 110°F [43.3°C] in cooling, and between 25°F [-3.9°C] and 90°F [32.2°C] in heating.

### Casing and Cabinet

The cabinet shall be fabricated from heavy-gauge galvanized steel and finished with corrosion-resistant powder coating. This corrosion protection system shall meet the stringent 1,000 hour salt spray test per ASTM B117. The interior shall be insulated with ½ in. thick, multi-density, coated glass fiber for noise suppression.

All units shall have separate holes and knockouts for entrance of line voltage and low voltage control wiring. All factory-installed wiring passing through factory knockouts and openings shall be protected from sheet metal edges at openings by plastic ferrules. The control box shall be field switchable from front to back for improved application flexibility with quick attach low voltage harnesses. The control box is shipped standard on the same end as the water connections.

### Refrigerant Circuit

All units shall utilize the non-ozone depleting and low global warming potential refrigerant R-410A. All units shall contain a sealed refrigerant circuit including a hermetic motor-compressor, bidirectional thermostatic expansion valve, optional reversing valve, coaxial tube water-to-refrigerant heat exchanger, optional hot water generator coil, and service ports. An optional vented double wall load coaxial water-to-refrigerant heat exchanger is available on O18 and O25.

Compressors shall be high-efficiency scroll type designed for heat pump duty and mounted on vibration isolators. The compressor shall be double isolation mounted using selected durometer grommets to provide vibration free compressor mounting. All models will feature a compressor discharge muffler to help quiet compressor gas pulsations. A high density sound attenuating blanket shall be factory installed around the compressor to reduce sound. Compressor motors shall be single-phase PSC with overload protection.

The coaxial water-to-refrigerant heat exchangers shall be designed for low water pressure drop and constructed of a convoluted copper (cupronickel option) inner tube and a steel outer tube. Refrigerant-to-water heat exchangers shall be of copper inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4135 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) working water pressure. The thermostatic expansion valve shall provide proper superheat over the entire liquid temperature range with minimal "hunting." The valve shall operate bidirectionally without the use of check valves.

**Option: Cupronickel refrigerant-to-water heat exchanger** shall be of copper-nickel inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4135 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) working water pressure.

**Option: Hot Water Generator (available on O40-O75)** - Internal double wall vented hot water generator coil refrigerant to water heat exchangers suitable for potable water shall be of copper inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4135 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) working water pressure.

**Option: Vented double wall water-to-refrigerant heat exchange (available on O18 and O25)** - Internal vented double wall water-to-refrigerant coaxial heat exchangers suitable for potable water shall be of copper inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4136 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) water pressure.

### Piping and Connections

Supply and return water connections shall be 1 in. [25.4 mm] for the O18-O40, 1 ¼ in. [31.75 mm] for the O50-O75, and all hot water generator water connections shall be ½ in. [12.7 mm] FPT copper fittings. The FPT fittings shall be fixed to the cabinet by use of a captive fitting, which eliminates the need for backup pipe wrenches.

### Electrical

A control box shall be located within the unit compressor compartment and shall contain a 75VA transformer, 24 volt activated, 2 pole compressor contactor, circuit breakers for protecting pumps, terminal block for thermostat wiring, and solid-state controller for complete unit operation. Electromechanical operation WILL NOT be accepted. Units shall be name-plated for use with time delay fuses or HACR circuit breakers. Unit controls shall be 24 volt and provide heating or cooling as required by the remote thermostat/sensor.

The manufacturer works continually to improve its products. As a result, the design and specifications of each product at the time of order may be changed without notice. Purchaser's approval of this data set signifies that the equipment is acceptable under the provisions of the job specification. Statements and other information contained herein are not express warranties and do not form the basis of any bargain between the parties, but are merely the manufacturer's opinion or commendation of its products. York and Affinity are registered trademarks of Johnson Controls, Inc., and are used with permission.

## Engineering Guide Specifications cont.

An Aurora, a microprocessor-based controller, interfaces with an external control to monitor and control unit operation. The unit control shall provide operational sequencing, high and low pressure switch monitoring, freeze detection, hot water limit thermistor sensing, lockout mode control, hot water, load and loop pump control, LED status and fault indicators, fault memory, field selectable options, and accessory output. The Lockout signal output shall have a pulsed option so that DDC systems can read specific lockout conditions from the control.

The optional Aurora Advanced Control shall also feature an Energy Monitoring Package that will provide real time total power consumption, compressor monitoring, On Peak input signal for utility controlled demand programs, intelligent hot water generation with user adjustable temperature limit, loop pump linking for multiple units driving a common flow center and up to two optional home automation inputs. Optional Performance and Refrigerant Monitoring kits provide real time data including refrigerant superheat.

A detachable terminal block with screw terminals will be provided for field control wiring. All units shall have knockouts for entrance of low and line voltage wiring. The blower motor and control box shall be harness plug wired for easy removal.

An optional Aurora Interface Diagnostic (AID) Tool shall communicate with the Aurora control allowing quick and easy access to monitoring, and troubleshooting of any Aurora control. The device shall include the features fault description and history, manual operation capability, sensor readings, timings, and other diagnostic tools.

Optional IntelliStart® (compressor Soft Starter) shall be factory installed for use in applications that require low starting amps, reduced compressor start-up noise, off-grid, and improved start-up behavior. IntelliStart shall reduce normal starting current by up to 60%.

### Accessories

#### Hose Kits - Automatic Balancing and Ball Valves with 'Y' strainer (field-installed)

*WaterFurnace P/N - WFI-HKM-100-24-MO*

*(1 in. hose kit for 018-040)*

*WFI-HKM-125-24-MO*

*(1 1/4 in. hose kit for 050-075)*

A flexible steel braid hose featuring Kevlar® reinforced EPDM core with ANSI 302/304 stainless steel outer braid and fire rated materials per ASTM E 84-00 (NFPA 255, ANSI/UL 723 & UBC 8-1). Ball valve at one end; swivel connector with adapter at the other end (swivel to adapter connection via fiber or EPDM gasket). Swivel connection provides union between heat pump and piping system. The hoses feature brass fittings, stainless steel ferrules. A "y" strainer is provided on one end for fluid straining and integral "blowdown" valve. A full port ball valve shall be provided with integral P/T (pressure/temperature) port on supply hose and automatic balancing valve with integral P/T ports and full port ball valve on return hose.

#### Specifications:

- Temperature range of 35°F [2°C] to 180°F [82°C].
- Max. working pressure of 400 psi [2756 kPa] for 1/2 in. and 3/4 in. hose kits; max. working pressure of 350 psi [2413 kPa] for 1 in. and 1 1/4 in. hose kits.
- Minimum burst pressure of four times working pressure.
